

SPECIFICATION AMENDMENTS

Please replace the paragraph on p. 5, spanning lines 13-17, with the following paragraph.

The monitoring system 304 includes processing circuitry 308, a part of which is a video display driver circuit card 310. The term "video display driver circuit card" is alternately referred to as a "graphics adapter," "graphics card," "v card," "video adapter," "video card," "display adapter," "video board," etc., but hereafter will be referred to as "video card." Of course, the processing circuitry 308 can be implemented in a variety of ways. As such, for example, the video card 310 can be a discrete circuit card separate from the motherboard, or can be one or more integrated circuits provided on the motherboard, etc. The video card 310 drives a video display device (VDD) 312 with non-text, typically hexadecimal code, display-generation data supplied over a connection 314. An input device in the form of a keyboard 316 is connected to the processing circuitry 308 via a signal line 318.
